## Quiz 34

Practice Quiz, 3 questions

3/3 points (100%)

**Congratulations! You passed!**[Next Item](#)

1. Given the following snippet of code, which controllers would be declared in the 'myApp' module?

1 / 1  
points

```
1 angular.module('myApp', [])  
2 .controller("MyController1", MyController1);  
3  
4 angular.module('myApp')  
5 .controller("MyController2", MyController2);  
6  
7 angular.module('myApp', [])  
8 .controller("MyController3", MyController3);
```

☐ MyController1

☐ MyController2

☒ MyController3

**Correct**

The module declaration on line 7 will wipe out the previous module declaration and create a new object to which the 'MyController3' will be attached. The previous controllers will be lost and won't be able to be referenced.

☐ MyController1 and MyController3

## Quiz 34

Practice Quiz, 3 questions

3/3 points (100%)

None. This code will cause an error.

2.

When importing several *artifacts* of a module using the `<script>` tags in the HTML, dependencies of some service must be declared FIRST and only then the service itself.

1 / 1  
points

True

False

**Correct**

Correct. Individual artifacts of a module can be imported in any order. Angular automatically figures out which ones need to be instantiated first.

3.

When importing your Angular code using the `<script>` tags in HTML, the order in which you list them does not matter as long as you specify the angular libraries code first (like `angular.min.js`, etc.)

1 / 1  
points

True

False

**Correct**

Correct. While individual module artifacts can be listed in any order, the module declarations **MUST** be listed prior to any code that *uses* that module in order to attach artifacts to it like controller, components, etc.
